Technician's Notes

X = Scratch
O = Damage

This report and any repair costs shown, are the results of a visual inspection only. Further checks may be necessary to determine the full extent of any requirements. Parts subject to wear are considered defective when the maximum amount of wear indicated by the manufacturer are reached.

*The condition of the camshaft belt cannot be conclusively verified by a visual check. It is essential that the camshaft belt be changed in accordance with the vehicle manufacturer's recommendation and driving conditions. Failure of the camshaft belt will often result in serious engine damage
